

## QUALITY AND ENVIRONMENTAL POLICY

For Proersys, Quality must be a differentiating and recognizable element from the beginning of its activity, being part of the engineering and construction management services, as an essential requirement to ensure its results in a consistent manner, with a sustainability approach in all our activity, taking into account the economic, environmental and social aspects, with a permanent vision towards the continuous improvement of all processes.

This approach must be done from the fundamental values of social responsibility, teamwork, elimination of any activity that does not provide real added value, respect for the environment, a well done job satisfaction, spirit of service, high technical knowledge in the provision of services and compliance with legislation.

These values are specified in the following principles:

1. Commitment to Quality of the Management and the entire Organization, each being responsible for the quality of their own work.
2. Quality Priority in the engineering and construction management services effectively and efficiently, meeting the client's requirements and eliminating costs without added value, with the application, in addition, of the necessary measures to minimize and correct the negative impacts on the environment caused by our activities.
3. Permanent training of personnel, and promotion of their sense of responsibility in environmental conservation.
4. Update and continuous improvement of production processes and management system.
5. Application and update of the quality and environmental management system.
6. Commitment to comply with the applicable legal requirements and other requirements that the organization subscribes related to its environmental aspects.
